1. How it works.
2. Where it is used.

How it works.

Where it is used.

A 3D point cloud visualization of a landscape. The terrain is color-coded by elevation, with blue representing lower areas and yellow/green representing higher areas. A dense network of red lines represents power lines and their supporting towers, crisscrossing the scene. The foreground shows a blue, textured area that could be water or a field. The background features more power lines and distant structures.
